PSYCHIATRIC EVALUATION — INITIAL

Patient:	Devon Alexander Mills	**MRN:**	SBHC-77412
DOB:	11/30/1995 (Age 27)	**SSN:**	629-44-1837
Date:	08/07/2023	**Evaluator:**	Dr. Rachel Kim, MD, Psychiatry
Address:	318 Colfax Ave E, Apt 9, Denver, CO 80203	**Phone:**	(720) 555-6634
Email:	d.mills95@protonmail.com	**Emergency Contact:**	Shonda Mills (mother) (720) 555-2201
Referral:	Self-referred via crisis line	**Insurance:**	Cigna #CIG-4421-88

REASON FOR EVALUATION

Mr. Mills presents for initial psychiatric evaluation following a call to the Colorado Crisis Line 3 days ago (08/04/2023) during which he expressed passive suicidal ideation without plan or intent. He reports a 6-month history of worsening depression following the loss of his job as a software developer at TechPath Inc. (laid off February 2023).

CHIEF COMPLAINT

"I can't get out of bed. I feel like nothing is ever going to get better."

HISTORY OF PRESENT ILLNESS

Mr. Mills describes a gradual onset of depressive symptoms beginning in early 2023. He reports pervasive low mood, anhedonia, hypersomnia (sleeping 12–14 hours/day), significant decrease in appetite (lost approximately 18 lbs over 4 months), difficulty concentrating, and social isolation. He has not left his apartment in approximately 3 weeks. He denies current active suicidal ideation but endorsed passive thoughts of 'not wanting to be here' during his most depressed episodes. No history of psychosis, mania, or hypomanic episodes. No substance use currently; history of marijuana use daily from ages 19–24, stopped 2019.

PAST PSYCHIATRIC HISTORY

Diagnosed with MDD, single episode, at age 22 (2017) by therapist Dr. Michael Torres at CU Health. Completed 8 sessions CBT — partial response. No prior psychiatric hospitalizations. No prior suicide attempts. No prior medication trials.

MENTAL STATUS EXAMINATION

Appearance: Well-groomed male appearing stated age. Casually dressed. Appropriate hygiene.

Behavior: Cooperative, good eye contact, slowed psychomotor activity noted.

Speech: Normal rate and volume, occasionally soft.

Mood: "Hopeless" — patient's words.

Affect: Dysthymic, constricted, mood-congruent.

Thought Process: Linear, goal-directed.

Thought Content: Passive SI without plan or intent. No HI. No delusions.

Cognition: Alert, oriented x4. Intact memory and concentration.

Insight/Judgment: Good/Good.

DSM-5 DIAGNOSES

Axis I: Major Depressive Disorder, recurrent episode, moderate severity (F33.1)

Axis II: Deferred

GAF Score: 48

PLAN

1. Initiate Sertraline 50 mg PO daily x 1 week, then increase to 100 mg daily.

2. Safety plan completed and reviewed with patient. Copy given to patient and filed in chart.

3. Referral to individual therapy — Colorado CBT Associates (contact: (720) 555-3300).

4. Return appointment in 2 weeks (08/21/2023) for medication follow-up.

5. Patient verbalized understanding and agreed to call crisis line (1-844-493-8255) or go to nearest ED if ideation worsens.
