DOB:	02/14/1991 (Age 32)	**SSN:**	541-32-7780
Date:	05/22/2023	**Provider:**	Dr. Amara Obi, MD, OB/GYN
Address:	4412 Bluebell Circle, Nashville, TN 37211	**Phone:**	(615) 555-9902
Email:	jasmine.carter91@yahoo.com	**Partner:**	Marcus L. Carter (615) 555-4481
Insurance:	TennCare BlueCare #TBC-229938	**EDD:**	09/28/2023
Gestational Age:	28 weeks 3 days (by LMP 11/04/2022, confirmed by US)	**Gravida/Para:**	G2P1001

INTERVAL HISTORY

Ms. Carter presents for her 28-week prenatal visit. She reports the baby has been moving well (felt fetal movement at 18 weeks). She denies vaginal bleeding, leakage of fluid, or contractions. She reports mild lower back pain, rated 3/10, relieved with a pregnancy pillow. She notes mild bilateral ankle swelling by end of day. No headaches, visual changes, or epigastric pain. She passed her 1-hour glucose screen at 24 weeks (result 128 mg/dL). Sleep is interrupted due to urinary frequency approximately 3x/night.

OBSTETRIC HISTORY

G1: 2018 — Spontaneous vaginal delivery at 39+1 weeks, male, 7 lbs 4 oz. No complications.

Current Pregnancy: Unremarkable to date. Anatomy scan 20 weeks normal. No genetic testing performed (declined NIPT).

Blood Type: O positive | Antibody screen: Negative (24 weeks)

PHYSICAL EXAMINATION

Vitals: BP 118/74 | HR 82 | Wt 168 lbs (pre-pregnancy 148 lbs, +20 lbs total — appropriate)

Fundal Height: 28 cm (= gestational age — appropriate)

Fetal Heart Tones: 156 bpm, regular, Doppler

Fetal Position: Cephalic by Leopold maneuvers

Edema: 1+ bilateral ankle pitting edema — physiologic

Cervix: Deferred this visit

LABS & RESULTS REVIEWED

1-hr GCT 24 wks: 128 mg/dL (normal). CBC 24 wks: Hgb 11.8 (mild anemia — on iron). GBS culture pending (due at 36 wks).

ASSESSMENTS

1. Intrauterine pregnancy, 28 weeks 3 days — uncomplicated.
2. Mild iron deficiency anemia — continue Ferrous Sulfate 325 mg daily.
3. Physiologic lower extremity edema.

4. Mild lumbosacral pain — pregnancy-related.

PLAN

1. Tdap vaccine today (28–36 week window) — administered right deltoid, lot #TDA-22341.
2. Rh immune globulin (RhoGAM) not indicated (patient Rh+).
3. Continue prenatal vitamins (Nature Made Prenatal DHA).
4. Continue Ferrous Sulfate 325 mg daily. Recheck CBC at 32 weeks.
5. Back pain: recommend prenatal yoga and supportive belt. PT referral if worsening.
6. Return in 2 weeks (06/05/2023) for 30-week visit.
7. Precautions reviewed: call immediately for decreased fetal movement, bleeding, SROM, contractions <37 wks, BP >140/90, severe headache, or visual changes.
8. Birth plan discussion initiated — patient desires low intervention vaginal delivery. Bradley method classes enrolled.
